

See the Blocks. Skip the Noise.

An overview of Shield Command Hub, the management console for the Shield platform, where teams see what Shield blocked and run the enforcement platforms from one place.

WHAT COMMAND HUB DOES

Shield blocks malicious traffic before it reaches the network. Shield Command Hub is where teams see that work and act on it: a single console for reviewing what was blocked, understanding network activity, and managing the Shield enforcement platforms. Because Shield stops threats at the connection, Command Hub shows prevented activity, not a queue of alerts waiting to be triaged.

One Console

manage and monitor the Shield enforcement platforms from a single pane of glass.

Full Detail

every blocked connection is recorded with source, destination, location, and risk category.

CSV & Excel

export event data and traffic logs on demand for analysis, reporting, and evidence.

VISIBILITY AND CONTROL

See what Shield is blocking

The Overview dashboard shows network health, inbound and outbound blocks, top threat countries, and high-risk categories. The Traffic and Devices views break activity down to the connection and the device, each blocked connection recorded with source, destination, location, and risk category.

Manage the platform from one place

Permits show what is trusted and what is denied by policy. From a single console, teams oversee the Shield enforcement platforms, review activity across them, and export the underlying event data when it is needed.

INSIDE COMMAND HUB

Overview dashboard

Network health, block counts, threat geography, and risk categories at a glance.

AI Insights

Plain-language analysis of network activity, with recommended actions to investigate.

Traffic and Devices

Connection-level and device-level detail behind every block Shield made.

Reports and export

Export event data as CSV or Excel for analysis, reporting, and evidence.

WHERE A CONVERSATION COULD START

The next step is a short walkthrough of Command Hub against your own environment, including the option to start in observe mode and see what Shield surfaces before enforcement. To learn more or arrange a walkthrough, visit intrusion.com.
